Question **9**

Not complete

Marked out of 1.00

Liam works at a car dealership and is responsible for recording the details of cars that arrive at the showroom. To make his job easier, he wants a program that can take the car's make, model, and price, and display the information in a formatted summary.

Assist him in the program.

Input Format :

The first line of input contains a string, representing the car make.

The second line contains a string, representing the car model.

The third line contains a float value, representing the car price.

Output Format :

The first line of output prints "Car Make: ", followed by the car make.

The second line prints "Car Model: ", followed by the car model.

The third line prints "Price: ", followed by the car price, formatted to two decimal places.

Refer to the sample output for formatting specifications.

Sample testcases :

Testcase 1 Input

Toyota
Camry
23450.75

Testcase 1 Output

Car Make: Toyota
Car Model: Camry
Price: Rs.23450.75

Testcase 2 Input

Tesla
Model S
79999.99

Testcase 2 Output

Car Make: Tesla

Car Model: Model S

Price: Rs.79999.99

For example:

Input	Result
Toyota Camry 23450.75	Car Make: Toyota Car Model: Camry Price: Rs.23450.75
Tesla Model S 79999.99	Car Make: Tesla Car Model: Model S Price: Rs.79999.99

Answer: (penalty regime: 0 %)
